## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 7-11 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Specifically, the specification fails to provide sufficient description of how to make sealed plates movable relative to one another.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 and 12-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Carlson et al. (US 4923057).

Carlson et al. disclose a variable rate spring assembly (see for example Figs. 12a and 12b) comprising: a housing 32 defining a chamber; a layer of compressible medium 18 disposed with said chamber; a layer of electro-reactive medium 18 disposed with said chamber; a coil

assembly V1-V4 associated with said layer of electro-reactive medium; a controller (see Fig. 14) in communication with said coil assembly to control a magnetic field generated by said coil assembly; and at least one attachment member movable relative to said housing (see col. 16 lines 63-65).

Re claims 2 and 3, see col. 7 lines 13-25.

Re claims 4-6, see the recesses shown in Fig. 5.

Re claim 12, see Figs. 11, 14, and 15.

Re claims 13-18, see Fig. 4.

Re claim 19, see col. 7 lines 13-25.

Re claims 20-22, see Figs. 11, 14, and 15.
